Achieving a Coherent Curriculum in Second Grade Jul 28 2019 The purpose of this study was to examine how a team of teachers used science as a means for designing and implementing a coherent curriculum. Using a phenomenological research framework and a case study method, I generated four assertions: 1) the teachers viewed science as a tool to motivate students and used an inquiry based approach to teach science; 2) they described inquiry as a process of thinking organized around questions, and shifted their instruction between guided and open inquiry approaches; 3) they taught all subjects using an inquiry-based approach, emphasized the process skills associated with doing scientific inquiry, and used the language of the process

skills throughout their instruction; 4) the success of their collaboration relied on members' unique contributions and commitment to professional development. This study demonstrates how an inquiry-based science curriculum can provide educators with an effective model for designing and implementing a coherent curriculum.

Ready, Set, SCIENCE! Jun 18 2021 What types of instructional experiences help K-8 students learn science with understanding? What do science educators, teachers, teacher leaders, science specialists, professional development staff, curriculum designers, and school administrators need to know to create and support such experiences? Ready, Set, Science! guides the way with an account of the groundbreaking and comprehensive synthesis of research into teaching and learning science in kindergarten through eighth grade. Based on the recently released National Research Council report Taking Science to School: Learning and Teaching Science in Grades K-8, this book summarizes a rich body of findings from the learning sciences and builds detailed cases of science educators at work to make the implications of research clear, accessible, and stimulating for a broad range of science educators. Ready, Set, Science! is filled with classroom case studies that bring to life the research findings and help readers to replicate success. Most of these stories are based on real classroom experiences that illustrate the complexities that teachers grapple with every day. They show how teachers work to select and design rigorous and engaging instructional tasks, manage classrooms, orchestrate productive discussions with culturally and linguistically diverse groups of students, and help students make their thinking visible using a variety of representational tools. This book will be an essential resource for science education practitioners and contains information that will be extremely useful to everyone – including parents – directly or indirectly involved in the teaching of science.

Supporting Grade 5-8 Students in Constructing Explanations in Science Dec 01 2019 Grounded in National Science Foundation (NSF) funded-research, Supporting Grade 5-8 Students in Constructing Explanations in Science and DVD provides middle grades science teachers with an instructional framework that breaks down the practice of scientific explanation into manageable components---claim, evidence, reasoning---and offers concrete examples of what this scientific inquiry practice looks like when it is successfully implemented in real classrooms. The chapters guide teachers step-by-step through presenting the framework for students; creating learning tasks

involving scientific explanation; providing curricular scaffolds (that fade over time) to support students developing explanations; developing scientific explanation assessment tasks; and using the information from assessment tasks to inform instruction. By incorporating this framework into curriculum materials, instructional strategies, and assessments, many schools have already witnessed its power to enhance students' conceptual understanding and ability to think and communicate scientifically while also affording teachers powerful opportunities to view student thinking and better adapt instruction to all students' needs. "I would encourage others to use [this book] as a resource for a professional learning community or department discussion group and the like... absolutely I would recommend it---why? It is simply good for our students' developing understanding of science..."---Pamela M. Pelletier, Senior Program Director, Science K-12, Boston Public Schools, Boston, Massachusetts "[This book] can easily be used to guide middle school teams to collaboratively work together to ask higher order thinking questions in any core content area. This type of questioning leads to great classroom discourse, therefore engaging students in using claims, evidence, and reasoning."---Kendra Walters Durham, Science Teacher, Wester Middle School, Frisco, Texas
