Over the past decade a small group of economists has challenged traditional wisdom about international trade. *Rethinking International Trade* provides a coherent account of this research program and traces the key steps in an exciting new trade theory that offers, among other possibilities, new arguments against free trade. Krugman's introduction is a valuable guide to research that has delved anew into the causes of international trade and reopened basic questions about the international pattern of specialization, the effects of protectionism, and what constitutes an optimal trade policy. In the four sections that follow, he takes a revisionary look at the causes of international trade, and discusses growth and the role of history, technological change and trade, and strategic trade policy.

Market Structure and Foreign Trade Jan 15 2021 Market Structure and Foreign Trade presents a coherent theory of trade in the presence of market structures other than perfect competition. The theory it develops explains trade patterns, especially of industrial countries, and provides an integration between trade and the role of multinational enterprises. Relating current theoretical work to the main body of trade theory, Helpman and Krugman review and restate known results and also offer entirely new material on contestable markets, oligopolies, welfare, and multinational corporations, and new insights on external economies, intermediate inputs, and trade composition.

The Spatial Economy Mar 17 2021 The authors show how a common approach that emphasizes the three-way interaction among increasing returns, transportation costs, and the movement of productive factors can be applied to a wide range of issues in urban, regional, and international economics. Since 1990 there has been a renaissance of theoretical and empirical work on the spatial aspects of the economy--that is, where economic activity occurs and why. Using new tools--in particular, modeling techniques developed to analyze industrial organization, international trade, and economic growth--this "new economic geography" has emerged as one of the most exciting areas of contemporary economics. The authors show how seemingly disparate models reflect a few basic themes, and in so doing they develop a common "grammar" for discussing a variety of issues. They show how a common approach that emphasizes the three-way interaction among increasing returns, transportation costs, and the movement of productive factors can be applied to a wide range of issues in urban, regional, and international economics. This book is the first to provide a sound and unified explanation of the existence of large economic agglomerations at various spatial scales.

Strategic Trade Policy and the New International Economics Oct 24 2021 This volume of original essays brings the practical world of trade policy and of government and business strategy together with the world of academic trade theory. It focuses in particular on the impact of changes in the international trade environment and on how new developments and theory can guide our trade policy. Contents: New Thinking about Trade Policy, Paul Krugman (Sloan School of Management, MIT). Rationales for Strategic Trade and Industrial Policy, James A. Brander (University of British Columbia). Strategic Export Promotion: A Critique, Gene M. Grossman (Woodrow Wilson School, Princeton University). Government Policy and the Dynamics of International Competition in High Technology, Michael Borrus, Laura d'Andrea Tyson, and John Zysman (all at the University of California, Berkeley). What Should Trade Policy Target? Barbara Spencer (University of British Columbia). Credit Policy and International Competition, Jonathan Eaton (University of Virginia). Industrial Policy: An Overview, Geoffrey Carliner (National Bureau of Economic Research). Japan's Industrial Strategy, Kozo Yamamura (University of Washington). U.S. Trade and Industrial Policy, William R. Cline (Institute for International Economics). Strategic Behavior and Trade Policy, Alvin K. Klevorick (Yale University) and William Branson (Princeton University). The New Political Economy of Trade Policy, J. David Richardson, (University of Wisconsin). Trade Policy: An Agenda for Research, Avinash K. Dixit (Woodrow Wilson School, Princeton University). Paul Krugman is Professor of Economics at MIT. A former member of the staff of the Council of Economic Advisers, Krugman is also coauthor, with Elhanan Helpman, of *Market Structure and Foreign Trade* (MIT Press 1985).

Essentials of Economics Jun 27 2019 *Essentials of Economics* brings the same captivating writing and innovative features of Krugman/Wells to the one-term combined micro/macro course. Adapted by Martha Olney (coauthor of the Krugman/Wells study guide and overall coordinator of its media/supplements package), it is the ideal text for teaching basic economic principles in a real-world context to students who are not planning to continue up the economics curriculum.

Rethinking International Trade Jun 19 2021 Over the past decade, a small group of economists has challenged traditional wisdom about international trade. "Rethinking International Trade provides a coherent account of this research program and traces the key steps in an exciting new trade theory that offers, among other possibilities, new arguments against free trade. Krugman's introduction is a valuable guide to research that has delved anew into the causes of international trade and reopened basic questions about the international pattern of specialization, the effects of protectionism, and what constitutes an optimal trade policy In the four sections that follow, he takes a revisionary look at the causes of international trade, and discusses growth and the role of history, technological change and trade, and strategic trade policy. Essays in part I review and challenge the theories of Ricardo and his successors, rethinking a 160-year tradition of looking at international trade. Models are presented in which trade frequently arises because of opportunities to exploit increasing returns through exports rather than from comparative advantage. In part II, Krugman traces the resulting pattern of trade specialization not only to the influence of comparative advantage but also to more arbitrary factors such as historical events, the ratchet effect of cumulative processes, technological changes, and temporary economic shocks. Part III expands on the theme of technological change as a key factor in determining the pattern of specialization in international trade and addresses questions about the effects of innovation, or lack of it, on a country's international trade position. The concluding essays examine the issue of protectionism along with other elements of trade policy, showing how protectionist policies, used as an export enhancement device by some national governments, may shift world specialization to the advantage of the protectionist nations. Paul R. Krugman is Professor of Economics at MIT.

Geography and Trade Dec 14 2020 "I have spent my whole professional life as an international economist thinking and writing about economic geography, without being aware of it," begins Paul Krugman in the readable and anecdotal style that has become a hallmark of his writings. Krugman observes that his own shortcomings in ignoring economic geography have been shared by many professional economists, primarily because of the lack of explanatory models. In *Geography and Trade* he provides a stimulating synthesis of ideas in the literature and describes new models for implementing a study of economic geography that could change the nature of the field. Economic theory usually assumes away distance. Krugman argues that it is time to put it back - that the location of production in space is a key issue both within and between nations.

Currencies and Crises Apr 17 2021 This new collection revolves around Krugman's work on international monetary economics from the late 1970s to the present in an effort to make sense of a turbulent period that "involved one surprise after another, most of them unpleasant." Paul Krugman's first collection of essays, *Rethinking International Trade*, mounted a spirited assault on established trade theory and proposed an alternative approach to account for increasing returns and imperfect competition. Less theoretical and more embedded in real-world experience, this new collection revolves around Krugman's work on international monetary economics from the late 1970s to the present in an effort to make sense of a turbulent period that "involved one surprise after another, most of them unpleasant." The eleven essays cover such key areas as the role of exchange rates in balance-of-payments adjustment policy, the role of speculation in the functioning of exchange rate regimes, Third World debt, and the construction of an international monetary system. They are unified by the same basic methodology and style the construction of a small theoretical model in order to simplify or clarify a puzzling or difficult world monetary problem.

Pop Internationalism Oct 31 2019 "Pop internationalists"--people who speak impressively about international trade while ignoring basic economics and misusing economic figures--are the target of this collection of Krugman's recent essays. In the clear, entertaining style that brought him acclaim for *The Age of Diminished Expectations*, Krugman explains what real economic analysis is. 6 illustrations. Copyright © Libri GmbH. Exchange Rate Targets and Currency Bands Feb 02 2020 This volume examines the intersection between a new analytical approach and a real economic problem.

International Economics Jul 01 2022 Rev. ed. of: *International economics: theory and policy* / Paul Krugman, Maurice Obstfeld. 8th ed.

Adjustment in the World Economy Mar 05 2020 There is a widespread view that world payments imbalances can be remedied through increased demand in surplus countries and reduced demand in deficit countries, without any need for real exchange rate changes. In fact shifts in demand and real exchange rate adjustment are necessary couplets, not substitutes. The essential reason for this complementarity is that a much higher fraction of a marginal dollar of US than of foreign spending falls on US output. As a result, a redistribution of world spending away from the US leads to an excess supply of US goods unless accompanied by a decline in their relative price. Although some economists believe that the integration of world capital markets somehow eliminates this problem, this is a fallacy that confuses accounting identities with behavior. The paper also addresses a number of related issues, such as the role of budget deficits in determining domestic demand and the effectiveness of nominal exchange rates changes in producing real depreciation.
