Smart Presenter Nov 28 2019 Presentations are ubiquitous and have become a commodity. PowerPoint and ready-to-use slide decks have taken away the power of the spoken word and have relegated the presenters to the sides. If you want to get back to the centre-stage and impact your listeners with your presentation, you need to creatively craft your content, power it with purpose and present it with passion. Whatever be your purpose - be it just to inform your audience or, to influence them to buy your ideas or products or, to even inspire them to take a new action - you can do it effectively and confidently with a set of nine tools that have been provided in this book SMART Presenter. These tools will help you with a creative approach to craft your contents, develop your talk and deliver it with impact. About SMART Tools Book Series: Smart Tools are quick-to-recall and easy-to-use tools that help you in your pursuit of professional smartness. Smart Tools will enable you > to structure your thoughts and ideas > to plan your approach and strategies, and > Put them into action with confidence.

Pond Aquaculture Water Quality Management Aug 06 2020 The only hope of supplying the world's ever-increasing demand for aquatic food products is through aquaculture, and the vast majority of this is conducted in ponds. Although pond aquaculture may appear at first to be an archaic

method of growing aquatic animals, it is one that is consistently profitable when the pond is managed properly. The most important aspect of pond management is the maintenance of adequate environmental conditions for good growth and health of the animal under culture. Water quality in ponds also extends into the areas of environmental protection and food quality and safety, which are increasingly important in today's world. This book provides the most complete, up-to-date account of water quality and its management in aquaculture ponds. It provides background information on the physical, chemical, and biological environment of pond aquaculture, and illustrates how the proper balance of these factors is the essential ingredient for successful production of fish and other aquatic animals. Management techniques for the control of water quality and productivity include liming, fertilization, mechanical aeration, water exchange, and the use of algicides and herbicides. The authors examine the effects of pollution on aquaculture and the validity of current criticisms by environmentalists. This book will be of great benefit to students, extension agents, policy-makers, government officials and the commercial aquaculture industry.
