Emerging Memory and Computing Devices in the Era of Intelligent Machines Nov 11 2020 Computing systems are undergoing a transformation from

logic-centric towards memory-centric architectures, where overall performance and energy efficiency at the system level are determined by the density, performance, functionality and efficiency of the memory, rather than the logic sub-system. This is driven by the requirements of data-intensive applications in artificial intelligence, autonomous systems, and edge computing. We are at an exciting time in the semiconductor industry where several innovative device and technology concepts are being developed to respond to these demands, and capture shares of the fast growing market for AI-related hardware. This special issue is devoted to highlighting, discussing and presenting the latest advancements in this area, drawing on the best work on emerging memory devices including magnetic, resistive, phase change, and other types of memory. The special issue is interested in work that presents concepts, ideas, and recent progress ranging from materials, to memory devices, physics of switching mechanisms, circuits, and system applications, as well as progress in modeling and design tools. Contributions that bridge across several of these layers are especially encouraged.

Weight Lifting Is a Waste of Time: So Is Cardio, and There's a Better Way to Have the Body You Want Jun 30 2022 You've been lifting for a few years. When you take your shirt off, do you look like a professional athlete? Do you even look like you work out? Many fitness "experts" defend weights and cardio like they are infallible, but where are the results? Why does almost nobody look even marginally athletic? Fitness may be the most failed human endeavor, and you are about to see how exercise science has missed some obvious principles that when enacted will turn you into the superhuman you always wanted to be. In *Weight Lifting is a Waste of Time*, Dr. John Jaquish and Henry Alkire explore the science that supports this argument and lay out a superior strength training approach that has been seen to put 20 pounds of muscle on drug-free, experienced lifters (i.e., not beginners) in six months.
