The Meet-Cute Project Mar 05 2020 "A sweet and honest rom-com that you don't want to miss." —Rachael Lippincott, New York Times bestselling author of *Five Feet Apart* To All the Boys I've Loved Before meets *Save the Date* in this sweet, hijinks-filled rom-com about a teen girl who will do whatever it takes to find a date for her sister's wedding. Mia's friends love rom-coms. Mia hates them. They're silly, contrived, and not at all realistic. Besides, there are more important things to worry about—like how to handle living with her bridezilla sister, Sam, who's

never appreciated Mia, and surviving junior year juggling every school club offered and acing all of her classes. So when Mia is tasked with finding a date to her sister's wedding, her options are practically nonexistent. Mia's friends, however, have an idea. It's a little crazy, a little out there, and a lot inspired by the movies they love that Mia begrudgingly watches, too. Mia just needs a meet-cute.

Visible Learning for Mathematics, Grades K-12 Jan 03 2020 Rich tasks, collaborative work, number talks, problem-based learning, direct instruction...with so many possible approaches, how do we know which

ones work the best? In *Visible Learning for Mathematics*, six acclaimed educators assert it's not about which one—it's about when—and show you how to design high-impact instruction so all students demonstrate more than a year's worth of mathematics learning for a year spent in school. That's a high bar, but with the amazing K-12 framework here, you choose the right approach at the right time, depending upon where learners are within three phases of learning: surface, deep, and transfer. This results in "visible" learning because the effect is tangible. The framework is forged out of current research in mathematics combined with John Hattie's synthesis of more than 15 years of education research involving 300 million students. Chapter by chapter, and equipped with video clips, planning tools, rubrics, and templates, you get the inside track on which instructional strategies to use at each phase of the learning cycle: Surface learning phase: When—through carefully constructed experiences—students explore new concepts and make connections to procedural skills and vocabulary that give shape to developing conceptual understandings. Deep learning phase: When—through the solving of rich high-cognitive tasks and rigorous discussion—students make connections among conceptual ideas, form mathematical generalizations, and apply and practice procedural skills with fluency. Transfer phase: When students can independently think through more complex mathematics, and can plan, investigate, and elaborate as they apply what they know to new mathematical situations. To equip students for higher-level mathematics learning, we have to be clear about where students are, where they need to go, and what it looks like when they get there. *Visible Learning for Math* brings about powerful, precision teaching for K-12 through intentionally designed guided, collaborative, and independent learning.

Families with Power Jul 29 2019 "What if...? That's the question that began Families with Power/Familias con Poder, a grass-roots organization of low-income students and caregivers in Northampton, MA in 2007. What if the families of students most impacted by the "opportunity gap" somehow had the power to organize whatever activities they felt would best help their children succeed? Mary Cowhey, a teacher who co-founded FWP, shares these stories and the voices of her fellow FWP organizers through vignettes and interviews, weaving in the lessons learned along the way. Inspired by Paulo Freire's popular education and the radical tradition of the Highlander Folk School, some Latina and African mothers, a great-grandmother and a couple of teachers founded Families with Power (FWP). Organizing Family Reading Parties in each other's living rooms (instead of meetings at school) to recruit additional families and identify potential leaders, FWP created a Highlander-style residential retreat that employed Freirean culture circles to pose problems and design programs to address them.

Readers will get an inside look at the benefits, successes and challenges of more than a dozen years of student and family engagement in the community and school, tackling issues from academics, race and class to immigration and public health"--

Effective Practices in Continuing Professional Development Oct 12 2020

Effective Practices in Continuing Professional Development presents

case studies of schools' journeys towards effective CPD practice as part

of a TDA national project. It tells the story of the goals set and achieved,

and the challenges and successes along the way. Each case study makes

specific reference to the nine factors or approaches to CPD identified in

the book as underpinning effective practice. This includes how a clarity

of purpose was established at the outset of CPD activity and how the

London Centre for Leadership in Learning's clear and rigorous impact evaluation framework supported and challenged projects to develop their thinking and practice. All of this is contextualised within the wider literature about the successful leadership of CPD and the effective practice of school workforce development. The editors introduce why effective CPD matters, and conclude with the lessons learnt and ways forward. Among the many cases provided by leaders in this field, Sara Bubb writes how coaching in a special school was used to make teachers and support staff feel more valued. John Tandy describes how primary school heads came together with the Local Authority to jointly develop a Leadership Charter that was a summary of effective leadership practice in the Borough. The book will interest practitioners and professionals who design and develop CPD opportunities and practice within all sectors of education, as well as all working within the strategic leadership of CPD. It also complements the TDA's national development programme for the leadership of CPD by showing how the strategic implications of the nine CPD approaches identified can improve the overall quality and impact of professional development and so enhance the learning for all children and young people.
