*Alluvial Fan Flooding Apr 16
2021 Alluvial fans are gently sloping, fan-shaped landforms common at the base of mountain ranges in arid and semiarid regions such as the American West. Floods on alluvial fans, although characterized by relatively shallow depths, strike with little if any warning, can travel at extremely high velocities, and can carry a tremendous amount of sediment and debris. Such flooding presents unique*

problems to federal and state planners in terms of quantifying flood hazards, predicting the magnitude at which those hazards can be expected at a particular location, and devising reliable mitigation strategies. Alluvial Fan Flooding attempts to improve our capability to determine whether areas are subject to alluvial fan flooding and provides a practical perspective on how to make such a determination. The book presents criteria for determining whether an area is subject to flooding and

provides examples of applying the definition and criteria to real situations in Arizona, California, New Mexico, Utah, and elsewhere. The volume also contains recommendations for the Federal Emergency Management Agency, which is primarily responsible for floodplain mapping, and for state and local decisionmakers involved in flood hazard reduction.

The Turnaround Experience

Jan 02 2020 The Turnaround Experience is a study of 16 attempted business turnarounds, each studied for twenty years. Nine were successful and seven unsuccessful, the differences owing to the strategies employed, the managerial skills, and character traits on the part of the people involved. The proposition advanced here is that the successful turnarounds focuses involved conscientious, carefully orchestrated efforts aimed at improving the firm's effectiveness as an efficient low-cost producer of increasingly differentiated quality products simultaneously. This study also revealed that successful turnarounds involve leaders who focus on operations, possess strong ethical values, have good personal reputations, and follow the principles of fair play in dealing with employees, creditors, suppliers, and customers. The 16 cases were

drawn from actual documented histories occurrences spanning more than 80 years from 1902 to 1988 in the automobile and agricultural equipment industries where much material is available on the events and the characteristics of the people involved.

Drift Exploration in the Canadian Cordillera

Jan 26 2022 As the frequency of near-surface mineral discoveries in the British Columbia Cordillera diminishes, exploration is more frequently focused on regions of high potential but mantled by unconsolidated sediments or drift, dominated by Quaternary deposits. This volume is a compilation of papers on various aspects of drift exploration, using examples from British Columbia. Topics of the papers include Quaternary geology, recognition of paleo-flow direction, drift potential mapping, drilling methods, glacial dispersal determination using indicator clasts, till geochemistry, biogeochemical sampling, lake sedimentology, laboratory techniques, shallow

seismic methods, borehole analysis, and resistivity mapping. Case studies elaborating on drift exploration concepts are dispersed throughout the compilation.

Enzyme Biocatalysis Jul 08 2020 This book was written with the purpose of providing a sound basis for the design of enzymatic reactions based on kinetic principles, but also to give an updated vision of the potentials and limitations of biocatalysis, especially with respect to recent applications in processes of organic synthesis. The first five chapters are structured in the form of a textbook, going from the basic principles of enzyme structure and function to reactor design for homogeneous systems with soluble enzymes and heterogeneous systems with immobilized enzymes. The last chapter of the book is divided into six sections that represent illustrative case studies of biocatalytic processes of industrial relevance or potential, written by experts in the respective fields. We

sincerely hope that this book will represent an element in the toolbox of graduate students in applied biology and chemical and biochemical engineering and also of undergraduate students with formal training in organic chemistry, biochemistry, thermodynamics and chemical reaction kinetics. Beyond that, the book pretends also to illustrate the potential of biocatalytic processes with case studies in the field of organic synthesis, which we hope will be of interest for the academia and professionals involved in R&D&I. If some of our young readers are encouraged to engage or persevere in their work in biocatalysis this will certainly be our more precious reward.

Chinese Characters Jun 06

2020 A systematic, building block-style plan for mastering the most daunting aspect of learning Chinese?how to remember the meaning of more than 2,000 of the most common characters?is provided in this handbook. Beginning with the simplest of strokes, such as those for numbers, scepter, and earth, and progressing to the extremely complex, such as destroy, insert, and mouse, this manual presents a methodology employing memory techniques to associate meanings with the characters' visual components. A sequence of numbered panels displays each character in two font styles, and a notation in the adjacent margin describes the character's pinyin pronunciation. Graphics that identify the

Lean Six Sigma for Service

Jun 18 2021 Bring the miracle

of Lean Six Sigma

improvement out of

manufacturing and into

services Much of the U.S.

economy is now based on

services rather than

manufacturing. Yet the

majority of books on Six Sigma

and Lean--today's major quality

improvement initiatives--

explain only how to implement

these techniques in a

manufacturing environment.

Lean Six Sigma for Services fills the need for a service-based approach, explaining how companies of all types can cost-effectively translate manufacturing-oriented Lean Six Sigma tools into the service delivery process. Filled with case studies detailing dramatic service improvements in organizations from Lockheed Martin to Stanford University Hospital, this bottom-line book provides executives and managers with the knowledge they need to: Reduce service costs by 30 to 60 percent Improve service delivery time by 50 percent Expand capacity by 20 percent without adding staff

First Year Calculus (First Edition) Oct 11 2020 First Semester Calculus for Students of Mathematics and Related Disciplines equips students with a working knowledge of the fundamental principles of calculus. The book provides an

engaging and accessible entry point into a critical field of study. It prepares students for more advanced courses in calculus and also helps them understand how to apply basic principles of calculus to solve problems within a wide range of disciplines, including business, biology, engineering, science, liberal arts, and mathematics. The text employs rigorous treatment of early calculus topics and detailed explanations to facilitate greater understanding and connection with the material. Over the course of five chapters, students learn about symbolic logic, continuity and limits, derivatives, mathematical and real-world applications of derivatives, and antiderivatives and their applications. Throughout, students are provided with rich guidance and copious opportunities to deepen their personal understanding of the subject matter. Highly readable and applicable, First Semester Calculus for Students of Mathematics and Related Disciplines is an

The Month

Drift Prospecting Jan 14 2021

Collection of papers presented in 1987, showing a variety of types of research being carried out in different geological settings in Canada and Finland. The papers indicate the value of grassroots studies in glacial geology and how the basis for drift prospecting is a thorough understanding of the provenance, stratigraphy, and ice flow directions of glacial sequences, backed by data on the geochemistry, lithology, and mineralogy of glacial sediments. Abstracts are included for each paper.

Professor Munakata's British Museum Adventure

Oct 30 2019 Professor Munakata Tadakusu has dedicated his life to unravelling the mysteries of Japan's past. Esteemed for his expert

knowledge, the Professor is invited to deliver a lecture at the British Museum in London on mythology and folklore. But when the Stonehenge megaliths suddenly disappear from Salisbury Plain in Wiltshire during the Professor's visit, he has to immerse himself in the history and deep-seated rivalries of Europe in order to foil a sinister scheme that endangers the Museum and its collections. In this unique compilation of ten manga episodes, we follow Professor Munakata as he becomes embroiled in an effort to uncover the conspiracy at the heart of these strange events. With some of London's key landmarks and the world's most iconic works of art under threat, the Professor enter a race against time to thwart the criminal plot.
